Question: There are no groundwater sampling parameters listed.

Answer: All groundwater samples will be analyzed for PVOC + Naphthalene.

Question: In the General Comments it says that competent bedrock is at 18 feet, but when we drilled there in August 2007, we encountered competent bedrock at 13 feet. We actually had to get a change order for the additional air rotary footage.

Answer: According to well boring logs of wells that had been drilled on-site competent bedrock was encountered at 18 feet. If competent bedrock is encountered before 18 feet a change order will be approved for commodity costs only. A copy of subcontractor bids pertaining to the cost of bedrock drilling will be required for change order approval.
